

Benefits

- Sustainable solution for drinking water in drylands.
- Savings in women's time for water collection
- Reduces rural - urban migration

Challenges

- Water Quality: Stored water can become smelly over time and may need to be boiled and sieved before use

Recommendation

Rainwater harvesting through taankas offers a sustainable solution for drinking water in drylands. With more support for construction and maintenance, taankas can significantly improve water availability and quality for residents. During the drought period, Tankaas may be supplied with freshwater through existing pipelines spread over the Thar desert.
